
Shift | Fitment Guide
ZX6R 2002

Written by Dame

1.1 Remove the six screws from the perimeter of the screen

1.2 Remove the plastic cover on the back of the dash and unplug from the dash

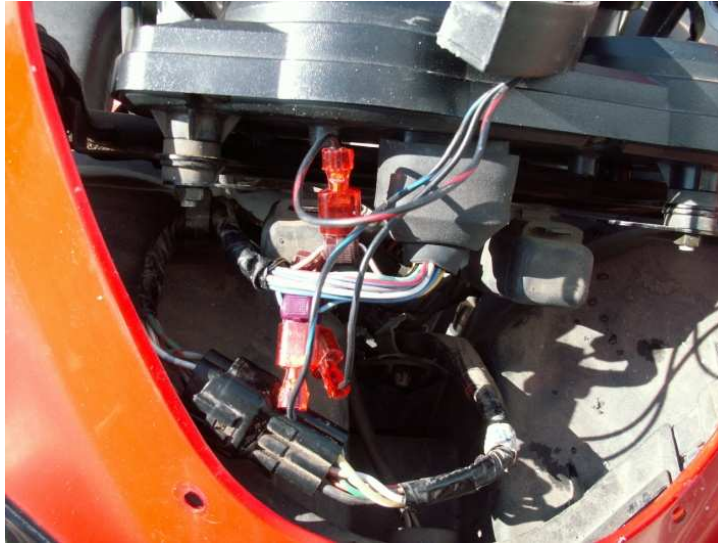

1.3 Connect the wires as follows. When connecting the Shift I wires to the Wiring loom allow enough room to remove the plastic cover in case you need to remove the dash in the future

Kawasaki

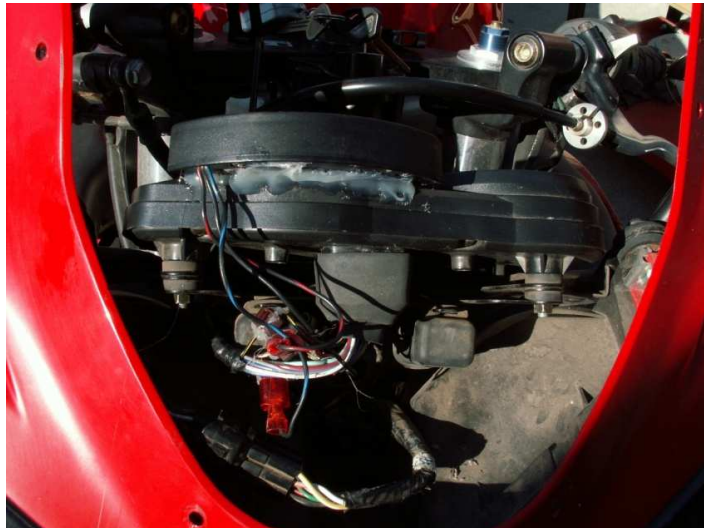

Ground = Black/Yellow
Ignition = Brown/White
Tacho = Light Blue (not Aqua)

Shift I

Black = Ground Wire
Black/Red = Ignition Wire
Black/Blue = Tacho Wire

1.4 Use double sided tape to attach the Shift I to the Dash. To give it more support you may like to try a hot glue gun. The good part about using a glue gun is that as opposed to super glue is that it remains rubbery and can be easily removed without damaging the dash

1.5 Replace the screen and you're done!
